

School Safety

Over the years, our team at Brett's have worked hard to perfect a few popular products to help protect kids from potential hazardous situations, often found in schools, playgrounds child care centres and kindergartens.

● Post Covers

These foam insulated covers are used around poles and posts located in the playground to help soften any collisions that may arise.

● Sand Pit Covers

Designed to keep foreign objects out of the sand pit while not in use. Fixing points are designed to be on flat with ground level to help avoid a child tripping over.

● Child Friendly Shade Sail Designs

All of the Brett's shade structures & sails are designed to ensure there has been minimal impact on the children's playground environment by making sure high traffic areas are free of posts and fittings. We also encourage our customers to use round posts so there are no dangerous corners.
